

ANDREA SPÁKNÉ PARÁDA

University of Nyíregyháza Eötvös József Practice Primary School and High School

Address: Ungvár sétány 12., H-4400 Nyíregyháza, Hungary

TEACHING CAREER IN BRIEF

I have been working at the University of Nyíregyháza Practice Primary School and High School since 2008. I have a degree in biology and environmental science. During my career I have obtained a Master's degree in both subjects and I have also passed the requirements of the teacher's professional examination. As my school is a 12-year public school, I teach in both primary and secondary classes. I am also an active participant in teacher training at the University of Nyíregyháza, as a teacher of subject leader and methodology. In recent years, I have been involved in several national tendering activities. The most significant are the "Complex Basic Program", in which I participated as a curriculum developer, and the pilot program "Development of Teacher Training Centres - Focus on Practice", where I contributed to the renewal of the training outcome requirements and the development of the practical system of training.

During the course of my work, I place great emphasis on the care of biology groups with an increased number of lessons, so I naturally also attach particular importance to the tasks of competition and school-leaving examination coaches and examiners.

My teaching credo is best summed up by a quote from Albert Szent-Györgyi: "School is for learning how to learn, for awakening the thirst for knowledge, for the joy of a job well done, for the thrill of creation, and for finding the work you will love."
